

Next lessons in the school project conducted in the Primary School in Skuły in cooperation with the Foundation Friends of the School in Książenicach, financed by the funds of the Foundation PZU were divided into two parts.

In the first part of the meeting we recognized species of trees and shrubs with needles. The students in pairs assigned names (received on cards) to branches with needles and twigs lying on the tables of each pair. One could use atlases and conductors.

In the second part of the lesson participants took part in a field game. They received a map of the school grounds, on which were marked selected species of trees and shrubs. It was necessary to find among many trees in the garden, a tree marked with a card, recognize it and on the map in the appropriate place write the species name. Lessons in the field brought participants a lot of joy and various emotions. Everyone wanted to be the best, taking the first place, and besides that they had a great time.
